FitCoach on Android

Setup guide · about 10 minutes

1 Install the app

1. On your Android phone, open this link in Chrome: github.com/bharathprakash8/FitnessApp/releases/latest/download/FitCoach.apk
2. The file **FitCoach.apk** downloads. Tap **Open** (or find it in **Files** → **Downloads**).
3. If Android says *"For your security, your phone is not allowed to install unknown apps from this source"*, tap **Settings** → turn on **Allow from this source** → go back.
4. Tap **Install**. If Play Protect asks, tap **More details** → **Install anyway**. (FitCoach is a private app for our group, so it isn't on the Play Store.)
5. Tap **Open**. You'll find the FitCoach icon on your home screen from now on.

2 Log in

1. Type the email address this guide was sent to and tap **Send code**.
2. Check your email for a **6-digit code** (look in Spam too) and type it in.
3. You stay logged in – you won't need a code every time.

"No account found"? Ask your trainer or admin – only they can add people.

3 First-time setup

1. Read and accept the **consent** screen (what we collect and who can see it).
2. Fill in the short profile: date of birth, height, weight, goal, food preference, any injuries or health conditions.

4 Turn on notifications

1. Go to **Me** → **Notifications** → **Turn on notifications** and tap **Allow**.
2. Tap **Send test notification** – you should get one in a few seconds.
3. Set your meal reminder times on the same screen.

Xiaomi, Redmi, Oppo, Vivo, Realme, OnePlus: these phones stop apps to save battery, so reminders may not arrive. Long-press the FitCoach icon → **App info** → **Battery** → choose **Unrestricted** / **No restrictions**. On Xiaomi also turn on **Autostart**.

5 Connect calories burnt (Health Connect)

1. Go to **Me** → **Health sync** → **Connect Health Connect**.
2. If Health Connect isn't on your phone, tap **Get Health Connect** and install it from the Play Store (Android 14 and newer already have it).
3. Allow FitCoach to **read** at least **Active calories burned**. Steps, total calories, sleep and heart rate help too.
4. Make sure an app is **writing** to Health Connect – for example **Google Fit**, Samsung Health or your watch's app (Fitbit, Noise, boAt, Amazfit…). In that app, turn on Health Connect sharing.
5. Back in FitCoach, tap **Sync now**. After that it syncs the last 7 days every time you open the app.

No watch or fitness app? That's fine – FitCoach estimates your burn from your workouts, and you can type your active calories on the Today screen.

6 Daily use

- **Food:** tap **Food** → **Log a meal**, take a photo or type what you ate. Check the estimate, fix anything, then save.
- **Workouts:** open **Workouts** to see today's plan and log your sets.
- **Today:** calories eaten vs your target, calories burnt, water and your next session.
- **Ask coach** (if you have the AI coach): ask anything about food and training.

7 Updating the app

When a new version is ready we'll tell you. Open the same link from step 1, download and tap **Install** – your data stays as it is.

Problem? In the app go to **Me** → **Report a problem**, or message your trainer.

Calories are estimates. Please check with your doctor before starting a new exercise or diet programme.
