How to use FitCoach

Your food, workouts and progress in one place

New here? First set up the app with the iPhone guide or the Android guide, then come back to this page.

For clients

Today	Food	Workouts	Stats	Me
Your day at a glance	Log meals	Your plan and sets	Trends and insights	Progress and settings

1 Today

- **Calories ring:** what you've eaten against your daily target, with protein, carbs and fat bars.
- **Calories burnt:** from your phone or watch (or estimated from your workouts), and your **net balance** for the day. Tap **Sync now** on iPhone to update it.
- **Water:** tap **+** for every glass (250 ml).
- **Today's workout** and your **next session** – tap **Join** for an online session.
- **Your week in review:** a short summary your trainer shares with you.

2 Food – log what you eat

1. Tap **Food** → **Log a meal**.
2. Choose how:
   - **Photo** – take a picture of your plate. Pick **Quick estimate** (~20 s) or **Detailed analysis** (~30 s, more careful).
   - **Type it** – e.g. "2 chapati, 1 cup dal, salad".
   - **Manual** – enter the calories yourself.
3. Check the result. Use **×0.5 / ×1 / ×1.5 / ×2** to change a portion, or tap an item to edit it. Changed the name or portion? Tap **Re-estimate**.
4. If FitCoach asks a question (like "How many chapatis?"), tap an answer.
5. Set the meal and time, then **Save**.

Calories are **estimates** – always check and correct them. Up to 15 AI estimates a day. Only photograph your food; meal photos are deleted after 7 days.

Food ideas for your week: when your trainer shares meal ideas, you'll find them under **Food**.

3 Workouts

- See your trainer's **plan** and **today's day**. Tap an exercise for tips on doing it right.
- Log each set: **reps and kg** (or minutes for cardio and yoga). You'll see what you did last time, and a **rest timer** starts after each set.
- For cardio machines you can add the **machine's kcal**.
- **My workouts:** build your own routines or use **Quick log** for extra training.
- **History** and **personal bests** show your progress.

4 Stats

- Pick **7, 30 or 90 days**: average calories against your target, days on target, streak, net balance and weight change.
- **Eating patterns:** usual meal times, late dinners, skipped breakfasts, your most-eaten foods and your biggest calorie sources.
- **Insights:** a few lines from the AI on what's going well and one thing to focus on.

5 Me

- **Progress:** add your weight and waist, and progress photos (private, once a week). See charts for weight, calories and workouts.
- **Notifications and reminders:** turn on notifications, set your meal and workout reminder times, send a test.
- **Health sync:** connect Health Connect (Android) or the Apple Health Shortcut (iPhone).
- **My sessions** and **Weekly summaries**.
- **Edit my details** (goal, diet, injuries, foods to avoid), **Language** (English / ಕನ್ನಡ) and **Time zone**.
- **Report a problem** – sends a message (and a screenshot, if you add one) straight to the admin.

6 Ask coach (AI coach)

If you have the AI coach or your trainer uses an AI assistant, you'll see a coach card on **Today**. Agree once, then:

- Tap **Ask coach** and ask about food and training – it knows your recent meals, workouts and goals.
- You get a short **morning and evening note**, and the coach may set today as a workout, light or rest day.
- It may check and correct meal estimates – you'll see **"Checked by coach"** on the meal, and bigger changes come to you as a suggestion to accept or keep yours.
- Health, medicine or supplement questions go to a person (your trainer or the admin). For chest pain, dizziness or breathlessness, stop and call your doctor or 108.

For trainers

Clients	Plans	Sessions	My fitness	Me
Your clients and alerts	Build workout plans	In person and Meet	Your own tracking	Settings

1 Clients

Clients who need attention come first, with flags such as: no food logged in 2 days, no workout in 3+ days, eating well below or above target, missed session, weekly summary ready.

Tap a client to open their page:

- **Overview** – profile, last health sync, AI assistant on/off.
- **Food** – their meals with photos (while available) and calories burnt.
- **Workouts** – what they logged; **Log a workout for them** after a session together.
- **Targets** – calories, protein, carbs, fat and water. FitCoach suggests an estimated starting point.
- **Plan** – assign a workout plan.
- **Reminders** – meal and workout times, lock them, add your own reminders (cardio, food, other).
- **Summary** – the AI drafts a weekly summary every Monday; edit it and **Share**.
- **Meal ideas** – draft a week of short meal ideas, edit, then **Share**.
- **Stats** and **Progress** – their trends, weight and photos.

2 Plans

- Create a plan → add days → add exercises with sets, reps and rest. Reorder, duplicate and assign to clients.
- Use the shared exercise library (gym, home and yoga) or add your own with a demo link.
- Plan days rotate: the client's next day follows the last one they logged.

3 Sessions

- Connect your Google account once to get **Google Meet** links and calendar invites automatically (or paste your own link, or choose in person with a place).
- Create one-off or repeating sessions, pick clients – they get a notification and a **Join** button, plus a reminder 15 minutes before.
- After the session, mark who was **present** or **missed**.

4 AI assistant (optional)

Switch on **AI assistant** on a client's Overview. Every morning the head coach reviews them and suggests changes (meal fixes, the day's plan, notes). You approve them under **Clients** → **AI assistant** – **Approve all**, one by one, or let small changes apply by themselves. Your plan stays yours.

5 My fitness

Track your own food, workouts and calories just like a client. Only you and the admin can see it.

Tips & privacy

- **No internet?** Meals, sets, water and burn entries are saved on your phone ("Saved offline – will sync") and sent when you're back online. Photo estimates need internet – type the meal instead.
- Tap the **refresh button** at the top of any screen to get the latest data.
- **Who sees your data:** you, your trainer and the admin – no other people. AI services (Google Gemini, Groq and, on the AI coach, Claude) process it as the privacy notice explains.
- You can ask the admin for a copy of your data, or to delete everything, any time.
- Not getting reminders on Xiaomi, Oppo, Vivo, Realme or OnePlus? Set FitCoach's battery to **Unrestricted** (see the Android guide).

Problem? In the app go to **Me** → **Report a problem**, or message your trainer.

Calories are estimates. FitCoach does not give medical advice – please check with your doctor before starting a new exercise or diet programme.
