FitCoach on iPhone

Setup guide · about 15 minutes

1 Add FitCoach to your Home Screen

On iPhone, FitCoach is a web app – no App Store needed. It must be added to the Home Screen so that notifications work.

1. Open this link in **Safari** (not Chrome or the Gmail browser): fitcoach-ten-nu.vercel.app
2. Tap the **Share** button (the square with an arrow, at the bottom or top of the screen).
3. Scroll down and tap **Add to Home Screen** → **Add**.
4. Close Safari and open **FitCoach from the new icon** on your Home Screen. Always use this icon from now on.

If the link opened inside Gmail or WhatsApp, tap the Safari/compass icon or "Open in Safari" first. Needs iOS 16.4 or newer for notifications (Settings → General → About → iOS Version).

2 Log in

1. Type the email address this guide was sent to and tap **Send code**.
2. Check your email for a **6-digit code** (look in Junk too) and type it in. iPhone often offers the code above the keyboard – just tap it.
3. You stay logged in – you won't need a code every time.

"No account found"? Ask your trainer or admin – only they can add people.

3 First-time setup

1. Read and accept the **consent** screen (what we collect and who can see it).
2. Fill in the short profile: date of birth, height, weight, goal, food preference, any injuries or health conditions.

4 Turn on notifications

1. In the Home Screen app, go to **Me** → **Notifications** → **Turn on notifications** and tap **Allow**.
2. Tap **Send test notification** – you should get one in a few seconds.
3. Set your meal reminder times on the same screen.

No "Turn on" button or nothing arrives? You are probably in Safari, not the Home Screen app – go back to step 1.

5 Connect calories burnt (Apple Health)

A small Apple Shortcut sends your active calories, resting calories and steps from Apple Health (and your Apple Watch, if you have one) to FitCoach.

1. In FitCoach go to **Me** → **Health sync**.
2. Tap **Get Shortcut** → **Add Shortcut**. Don't rename it – it must stay **FitCoach Sync**.
3. Back in FitCoach tap **Connect**, then **Finish in Shortcuts**. The Shortcut opens, saves your code and syncs.
4. The first time, iPhone asks for permission – tap **Allow** for Health and **Always Allow** for sending data to FitCoach.

Make it run by itself every day

1. Open the **Shortcuts** app → **Automation** tab → **+** (New Automation).
2. Choose **Time of Day** → **10:00 PM**, **Daily**, and **Run Immediately** → **Next**.
3. Pick **FitCoach Sync** → **Done**.
4. Repeat for **7:00 AM** (this completes the previous day).

You can also tap **Sync now** on the calories card any time. No Apple Watch? Your iPhone still counts steps and active calories while you carry it.

6 Daily use

- **Food:** tap **Food** → **Log a meal**, take a photo or type what you ate. Check the estimate, fix anything, then save.
- **Workouts:** open **Workouts** to see today's plan and log your sets.
- **Today:** calories eaten vs your target, calories burnt, water and your next session.
- **Ask coach** (if you have the AI coach): ask anything about food and training.

The app updates itself – nothing to install.

Problem? In the app go to **Me** → **Report a problem**, or message your trainer.

Calories are estimates. Please check with your doctor before starting a new exercise or diet programme.
